TECHNICAL SKILLS

Game Dev Tools: Unity, Git, GitHub, Android Studio, Docker, Unreal

Programming: C#, Python, Java, JavaScript, HTML/CSS, PHP, Typescript, R, C++, C, Deep Learning, MySQL

Soft Skills: Team leadership, rapid prototyping, multilingual communication (English/French/Spanish)

Design: Game mechanics, narrative design, prototyping, D&D homebrew, worldbuilding

GAME DEVELOPMENT EXPERIENCE

Backend Developer | Lookout | 2025–Present

- Designed the testing suite for the backend system.
- Collaborated alongside a team of 8+ people.
- Reviewed pull requests and tested team members code.

Community Playtest & Player Support / Contractor | Kotoko Inc. | 2026–Present

- Conducted specific gameplay testing tasks and provide detailed feedback to improve mechanics and identify usability issues.
- Provided general operational support for live-service game features.
- Managed live playtests by answering player questions and de-escalating conflicts to maintain a constructive testing environment.
- Identified recurring gameplay bugs and communicated them clearly between players and the development team.

Freelance Game Designer | Self-Employed | 2023–Present

- Designed and developed 3+ indie games.
- Implemented mechanics, UI, and narrative systems in Unity/C#.

Games Club President (Formerly Vice President) | UBC Okanagan | Sept 2024–May2026

- Helped organise and coordinate weekly meet ups for 20 + students, ensuring smooth operations.
 - Assisted with special events and public programs.
-

TECHNICAL PROJECTS

Duck Guns | University Project | Arcade Shooter, Unity

- Built a round-based Duck Hunt clone with unique AI ducks, infinite mode, and upgrade progression.
- Optimized collision systems and bug-tested mechanics for seamless gameplay.
- Composed/implemented original audio and UI to enhance player immersion.

Pablo May Die | GMTK Game Jam 2024 | Roguelike, Unity

- Designed and developed a Vampire Survivors-inspired roguelike with enemy wave systems, upgrade mechanics, and dynamic weapon combos.
- Implemented UI menus, success/death states, and audio integration for polished player feedback.

TA Assignment System | University Capstone Project | Fully Complete Website

- Engineered a full-stack TA assignment system using Python, TypeScript, React, and PostgreSQL, implementing secure RESTful APIs and robust database architecture.
- Led with Agile methodologies, leading sprint planning and code reviews while enforcing strict Git protocols and CI/CD practices via comprehensive test suites.
- Directed two full development-test-feedback cycles, successfully deploying a scalable, bug-tested web application used concurrently by multiple end-users.

John Spaghetti | GMTK Game Jam 2025 | Puzzle Game, Unity

- Designed and developed a short narrative puzzle game focusing on humorous scenarios and comedic problem-solving.

Puzzle Website | University Project | Social Media Site

- Engineered a full-stack social puzzle-sharing platform with user profiles, a live comment system, and a comprehensive admin panel for content management.
-

EDUCATION & CERTIFICATIONS

Bachelor, Computer Science | UBC | High Distinction

- Relevant courses: Deep/Machine Learning, AI, Game Development, Software Engineering, HCI.

High School Diploma | La Châtaigneraie (Ecolint), Switzerland | 2023
